

## How to design eBook Covers + Software Box Covers.

One of the key factors online is to make your product look presentable.

Here are a few ways to make good eBook covers and software box covers.

1: Visit <http://www.groundbreak.com/graphics.html>

Use their free tool to make graphics.

All you have to do is open up a graphic design program, create a 1 dimensional cover, then use the online system to make a book cover.

These are decent and best of all free...but the quality lacks a little.

2. Use eCover Studio. This program rocks! It is my favorite choice. You should download the fully functional trial version and check it out. I mean, really experiment with it, because it is fabulous.

Visit <http://refer.ecoverstudio.com/click.cgi?id=jag535>

3. Download Scott's box shot maker from <http://www.boxshotmaker.com>

However, you should download the older version, it works better.

4. Pay a graphic designer.

These guys do great work. Take a look at their portfolios and decide if you want to order some graphics. Though it can be expensive (\$150) it is worth it if you really want a great, professional looking product.

My friend Max over at <http://www.maxcovers.com> does a great job!

To make your own covers, you can use a combination of clip-art and a graphic design program.

Just find a good clip art picture that you can use, add some text, and use any of the methods listed above to make covers.

You can learn this fairly quickly, and even if you don't become a pro at it, it's still useful to be able to make decent covers for your own products.
